Connor Neary

Software Development Internship | Third Year Student

Tullamore, Co. Offaly | 086 226 2891 | coneary12@gmail.com

Profile

Third-year Software Design student at TUS Athlone seeking a software development placement. Achieved averages above 70% in both completed years, with strong results in programming and databases. Built a Python desktop gym booking application and a Power BI environmental dashboard, and am contributing to a team newsagent system. Interested in backend development, databases and cloud computing. Previous hospitality and engineering work has given me experience taking responsibility, communicating with customers and colleagues, and solving practical problems under pressure.

Education

Technological University of the Shannon | Athlone

Software Design with Artificial Intelligence for Cloud Computing | Year 3

Academic results: Year 1: 71.08% | Year 2: 70.91%

Selected Year 2 results: Software Development 2.2: 78%; Databases: 76%; Software Development for Cloud 2.1: 76%; Agile Methodologies 2.1: 79%.

Relevant studies: object-oriented programming, relational databases, web development, systems analysis and design, Agile methodologies and data visualisation.

Technical Skills

Languages: Java, Python, SQL, HTML and CSS

Applications and tools: PyQt5, MySQL, DataGrip, Power BI and DAX

Development concepts: Object-oriented programming, inheritance, aggregation, polymorphism, exception handling, JSON persistence and relational database design

Selected Projects

Gym Membership and Class Booking Application | Python, PyQt5, JSON

- Built a desktop application to create, edit, list and delete members, create fitness classes and manage bookings between members and classes.
- Modelled members, classes and bookings using object-oriented programming, applying inheritance, aggregation and polymorphism.
- Implemented JSON save/load functionality so records could be retained between sessions, with exception handling for application errors.

Dublin Environmental Dashboard | Power BI, DAX, Open-Meteo

- Combined hourly weather and air-quality data for Dublin into a model with weather, air-quality and date tables.
- Built temperature charts, AQI and particulate indicators, and date/hour slicers so users could explore conditions over time.
- Worked through duplicate timestamp, relationship and blank KPI issues while refining the dashboard and its data model.

Employment Experience

Night Porter | Hodson Bay Hotel | July 2025 - May 2026

- Handled guest enquiries and reception phone calls during overnight shifts, resolving issues and referring matters to the manager where required.
- Responded to unexpected guest and safety situations, including incidents requiring emergency services, while remaining calm and communicating clearly.
- Balanced cleaning, event room preparation and guest support during busy wedding nights, coordinating tasks with a small overnight team.

Apprentice Metal Fabricator | IRT, Tullamore | January 2021 - April 2024

- Worked from engineering drawings and used workshop equipment to support fabrication work, paying close attention to measurements and specifications.
- Collaborated with experienced colleagues to meet production deadlines and quality requirements, following workshop safety procedures.
- Developed a practical approach to troubleshooting and completing work accurately through technical training and hands-on experience.

Current Development Work

Newsagent Delivery System | Group coursework | In progress

- Contributed to requirements gathering for a delivery system, preparing questions on delivery pauses, missed deliveries, stock shortages, billing and reporting.
- Responsible for the publications area within a team dividing the initial work across publications, customers, orders and database development.
- Worked on user stories to translate stakeholder needs into clear features and establish the scope of the system.

Combat Sports Database | Personal learning project | In progress

- Developing a MySQL schema for fighters, promotions, weight classes, events and fights, using DataGrip and a local XAMPP setup.
- Working on relationships for judges and round statistics, including a unique constraint to prevent duplicate records for the same fight, fighter and round.

This project applies relational database concepts to a personal interest in MMA and boxing, with a focus on learning how to organise and maintain connected data.

Achievements and Interests

- Microsoft Office Specialist certification in Word and PowerPoint.
- Distinction in Phase 2 Metal Fabrication training through SOLAS / LOETB.
- Selected for the Leinster U18 Rugby Development Squad; experience working towards shared goals in a competitive team environment.

Interests include combat sports, fitness and building practical software around subjects I enjoy.
